DETAILED ACTION

Election/Restrictions

1. Applicant's election **without** traverse of claims 13-21 in the reply filed on 09 November 2006 is acknowledged. Claims 1-12 and 22-35 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 13-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 13 is vague and indefinite because it is unclear where the analyte detection means and the control detection means are located in the device.

Claims 17 and 21 recites "optional" steps and thus, these steps have not been given patentable weight.

Claim 19 is vague and indefinite because it unclear what is being claimed.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 13-21 are rejected under 35 U.S.C. 102(b) as being anticipated by May et al (WO 88/08534).

May discloses an assay device comprising a test strip having a control zone and a test zone and means for detecting test results and control results comprising dye loaded liposomes or colloidal gold particles (page 10). The control zone is loaded with an antibody that will bind to a labeled antibody and exhibit a detectable signal. The control zone can contain also an anhydrous reagent that when moistened, produces a color change or color formation. Or as an alternative, the control zone could contain immobilized analyte which will react with excess labeled reagents from the first zone (page 9). Quantitative measurement may be done visually by eye or by instrument (page 10, lines 10-13).

Conclusion

6. No claim is allowed.
